

MONEY-BACK GUARANTEE PROGRAM

Problem: The Stethoscope Diaphragm

- A highly contaminated vector that “transmits via touch”¹

Solution: The DiskCover System

- The most effective between-patient stethoscope hygiene method²

When you purchase and install The DiskCover System for between-patient stethoscope hygiene, you are installing the first true solution for stethoscope transmission between patients. Each single use, Disk Cover barrier provides a “clean point of contact” between the stethoscope and the patient.

GUARANTEE: CLINICAL PREFERENCE FOR THE DISKCOVER SYSTEM

In a 7 center, open label registry, clinical users across primary care, specialty care, emergency care, and critical care, clinical users preferred “The DiskCover System” for between patient hygiene.³

“We are so confident that you will like The DiskCover System that if you and your staff do not feel this is the best way to protect your patients from pathogen transmission from the stethoscope, we will refund your money and return the product, free of charge.”
