

# INTRODUCING THE DISKCOVER™ SYSTEM

The AseptiScope™ DiskCover™ System automates the touch-free application of single-use disk covers onto stethoscope diaphragms. The disk cover serves as a robust barrier for aseptic patient contact.

The DiskCover System includes a wall-mounted dispenser that houses a Clean Cassette™ containing single-use disk covers. The DiskCover System disk covers have been proven effective in providing an aseptic barrier to prevent pathogen exposure to the patient by the stethoscope.<sup>1</sup>

## TOUCH-FREE DISPENSER

- Ensures aseptic application
- State-of-the-art sensor technology
- Intuitive, requires no formal training

## CLEAN CASSETTE

- Houses single-use disk covers
- Preserves aseptic environment
- Quickly and easily replaced

## ASEPTIC SINGLE-USE DISKCOVER DISK

- Robust and effective stethoscope barrier
- Acoustically invisible<sup>2</sup>
- Safe for patients and stethoscopes
- Peel-off tab for easy removal

Advanced new touch-free technology

Highly effective single-use barrier

Protects patients from harmful biohazards and contaminants

# RAPID • TOUCH-FREE • EFFECTIVE

The DiskCover System requires no formal training, takes seconds to apply an aseptic barrier, and provides clinicians a clean stethoscope surface for immediate use.

WAVE

APPLY

REMOVE

Once applied, the disk cover protects the patient from pathogen exposure<sup>1</sup> without compromising the sound quality of the stethoscope<sup>2</sup>.

Allows clinicians more time for patient care

Highly visible for patient reassurance and infection control compliance

Disk cover easily removed after each patient examination
